

## Speed cameras

### Getting started

This case study comprises a collection of lesson plans, handouts and other resources mainly presented as inter-linked MS Office documents.

Double-click on **Start** for a summary page with links to key documents.

Alternatively, the individual files can be opened from the **content** folder.

### Hardware & software requirements

#### **Hardware:**

This case study can be used on a Windows PC or Mac.

To use the materials in class, an interactive whiteboard or screen and data projector will be needed. A computer with sound output and speakers will be necessary to play the video to a class.

#### **Software:**

Microsoft Word and Excel 2000 or later are required.

QuickTime is needed to play the video: see <http://www.apple.com/quicktime/>

Some of the documents link to external websites with background information, so an internet connection is useful but far from essential.

For correct operation of the Excel spreadsheets, macros must be enabled. If the Excel macro security level (**Tools/Macro/Security**) is set to High it will need to be changed to Medium and Excel re-launched.
